ABSTRACT

Dropped-out and at risk of drop-out students are some of the most affected during this Corona Virus (Covid-19) Pandemic. Thus, this research project surveyed the 30 dropped-out and at risk of drop-out students. Surveys were administered as research instruments to the study to extract responses on why students dropped-out and at risk of drop-out. The research findings showed that the pandemic has affected a greater part in education on the potential causes on why students find hard to pursue on their studies especially in this pandemic because of financial status, being the breadwinner that leads the students to think that they can survive without education. Result dictated that the most factor can affect the student were important but not urgent were the students focus to work than to learn. The important of this study is to map out the specific factors of dropped-out and at risk of drop-out during pandemic, aiding them with initiatives by providing them a program that the school should implement like “*Project Bahay*” to home visit and monitored the struggling students in order to identify the “at risk” students.
